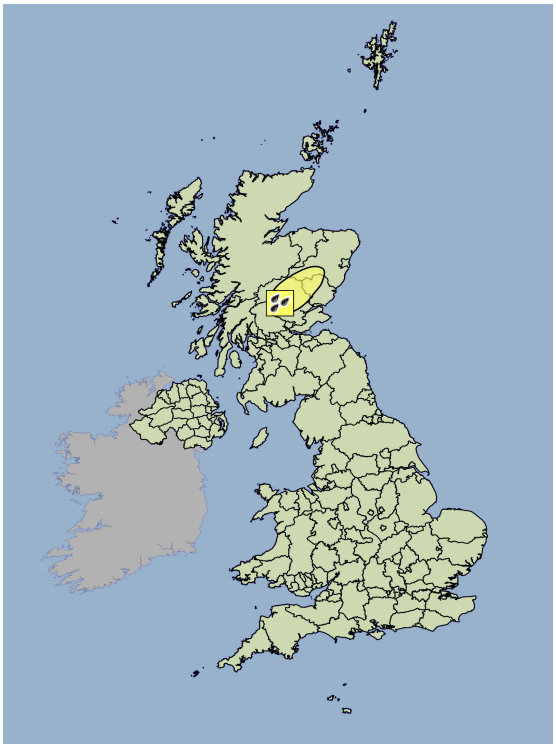
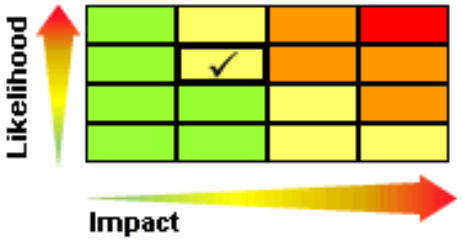
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
The weather system, which has given a lot of rain across some southern and central areas of Britain during Saturday and Sunday, looks set to slow down and perhaps stall across Scotland on Monday. Rainfall amounts will be highly dependent on whether the frontal system stalls altogether, in which case rainfall amounts might exceed 50 mm in places, with some minor flooding impacts. The alternative scenario would seem to be for the front to trundle a little further north before sinking south again, thus spreading lesser amounts of rain over a broader area. This warning will probably be updated as the situation becomes clearer.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **18:00 on Mon, 24th Aug 2015** until **06:00 on Tue, 25th Aug 2015**

Rain is likely to be quite persistent across Tayside, Angus and extending into southern Aberdeenshire through Monday, with some heavy outbreaks quite likely to last into Monday night and the early hours of Tuesday, before easing.

The public should be aware of the risk of localised flooding.
